MULTIROOM AUDIO, VIDEO AND CONTROL SYSTEMS

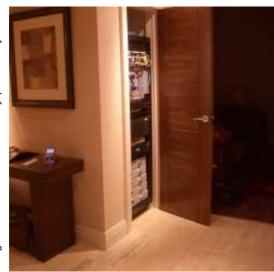

NEXUS MULTIROOM MUSIC AND VIDEO FOR HOMES

AVNex have been designing and manufacturing Nexus Multiroom Audio and Video systems since 2001 in the UK.

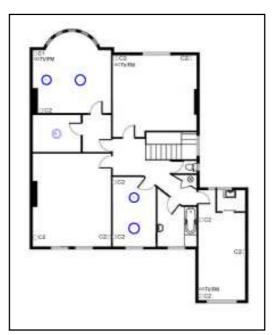

Nexus hubs are designed to sit at the heart of your home, to distribute all music and video, telephony and data

Nexus systems are modular and flexible to suit your particular needs. The solution is based on an easy to install CAT5 cabling network with speaker wires to any in built speakers.

TYPICAL PLANS

These plans show a typical Nexus installation;

- a flood wired CAT5 network for any AV, telephony or networked device,
- ceiling speakers with hidden IR receivers
- flat screens mounted at high level in corners or on the wall to save space.
- a home cinema,
- control using a simple remote
- discrete corner speakers in rooms where ceiling are decorative.
- equipment cupboard.

Images of Nexus installation kindly provided by I-Solutions 5, Bournmouth.

NEXUS AV HUBS

Nexus hub routes music and video all around your house from all your AV equipment. Nexus sits at the centre of your cabling network and usually in a cupboard hidden away with all your audio and video equipment. It is modular allowing you to build a system to suit your home and it is designed to be futureproof and upgradeable as you grow. It is also simple to use giving you control of all your equipment at your fingertips.

- 6, 9, 12 or 18 rooms.
- 6, 9 or 12 AV sources (eg Satellite, Freeview, DVD or music players)
- Composite Video
- Stereo Line Level Audio

NEXUS AMPLIFIERS

Each speaker is powered by an amplifier. The Nexus Amps are either placed at the central hub for maximum flexibility and accessibility or in ceiling to minimise wiring.

- For central amp cable with CAT5 and 4 core speaker wire to speakers.
- For In ceiling amp wire with CAT5 to amp + local power supply.
- 15W per channel stereo amplifier.
- Nexus Modular Amp case holds 2-6 amplifiers

NEXUS PATCH PANEL

The Nexus system uses industry standard CAT5, 5e, 6 or 7 cabling in a star configuration to a central hub. Nexus patch panel box terminates CAT5 and speaker wires.

- 8-48 CAT5 terminations
- 6-12 ceiling speaker connections
- Cable Cat5, 5e, or 6, 7 Unshielded or Shielded.

NEXUS SPEAKERS

Complement you home with in ceiling speakers. Nexus ceiling speakers have in built IR receivers for a simple elegant installation. A range of speakers are availble for different situations in both stereo and home cinema configurations.
